

The contingent workforce technology solution you've been asking for.

Simple to Use • Quick to Implement • Easy on your Budget

Pro Staff developed Prompt after listening to our customers with a growing temporary workforce but without a large workforce technology budget. They told us they wanted quick and easy access to valuable contingent workforce information including job order placement, requisition approvals, time & attendance, invoicing, spend management and performance reporting. Pro Staff responded by developing our **Prompt On>demand Workforce Solution**, built on Oracle technologies consisting of PeopleSoft and database products. Prompt is a resource and budget conscious alternative to complicated implementations of a vendor management system or comprehensive spend-tracking software.

The Value of Prompt

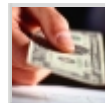

While many technologies can require a sizable investment of time and money to implement, Prompt is a quick, easy and cost-effective solution. In fact, Prompt is fully configured to your specifications in less than 30 days. Prompt also offers the added convenience of 24/7 access to your workforce management data.

*"Prompt was implemented in just 6 days and training took us only 15 minutes."
- Manufacturing Manager, MCEA*

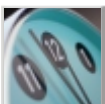

Prompt Modules

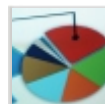

Pro Source
[Job Order Requisition & Approval]
